

# Control4 & Josh

*Talk. Touch. Push. Point.*

cyberManor

We built our **New Home Technology Center** behind our main office in Los Gatos for one simple reason. To allow our potential clients and builder partners to *see and experience the ease and simplicity in which technology in the home can be controlled - whether you are home or on the road.*

We call it a **talk, touch, push, or point** control experience. Use Josh voice commands to welcome you home and turn on lights, music, raise shades, and disarm the security system. Touch the large Control4 screen at the entry way wall or master bathroom to intuitively control music, open the skylights, or turn on the ceiling fan. Push the Control 4 wall keypad buttons to light up specific rooms in the home or raise or lower the shades. Pick up the Control4 NEEO universal remote controller to enjoy a rich and immersive TV viewing experience by pointing at the app experience you want to launch. When you're leaving home use your mobile phone or Apple Watch to close the garage door and arm your security system.

Technology in the home that's easy to use for everyone in the home, in every room, anytime of the day, home or away - that's what smart home living is all about. **Make an appointment to see and experience our Talk, Touch, Push or Point control solutions at our national award winning cyberManor New Home Technology Experience Center today!**

# Talk. Touch. Push. Point. Control Your Home Your Way.

Built-in Control4 touchscreens at the entry way and master bathroom - fingertip control of your home when you're arriving, leaving, waking up or going to sleep.

Aesthetic, back-lit, customized, Control4 keypads throughout the home make it easy to control all lights, shades, skylights and music in each room of the house.

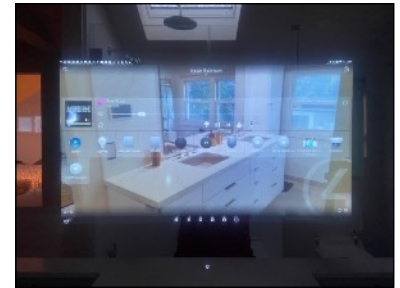

The sleek Control4 NEEO Universal remote controller makes it easy to watch your favorite Netflix, YouTubeTV, Disney or Amazon programs at the push of a button.

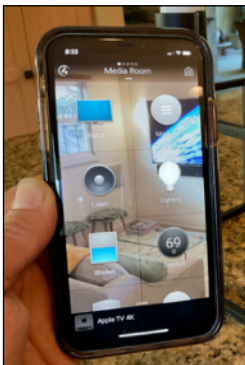

View the Control4 control touchscreen on your TV and point to what you want to do. See your outside cameras, dim the lights, and increase the room temperature from your TV.

Talk to Josh to welcome you home, turn on the lights, open the shades, and play your favorite music. When it's time to sleep tell Josh goodnight and your home turns off.

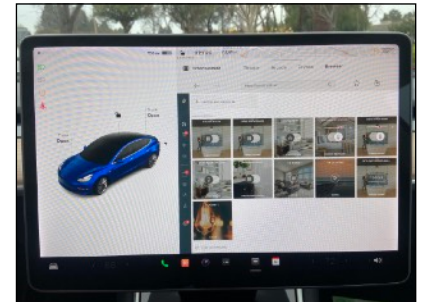

Use the Control4 touchscreen interface on the Smart Mirror in the Master Bathroom to control lighting, music, shades and even see who is at the front door.

Home or away, use the Control4 application on your mobile phone to view your home's cameras, security, lighting, or climate settings.

Use your Apple Watch when you are outside entertaining to control music, outdoor lighting or even a fountain. Or when you're coming home to open the garage door or gate.

The web browser on a Tesla dashboard can remotely connect to your home to control music, security, climate, and shade settings.
