

INNOVATION. INTELLIGENCE. INTEGRATION.

We partner with you and your design-build team to custom design home technology solutions that enhance the way you live, work, and play in your home.

For over 20 years we've created home technology solutions for more than 1000 of the finest homes in the San Francisco Bay Area, including four Sunset Idea Homes, a LEED Platinum Home of the Year, and HP's Digital Showcase Home.

The cyberManor team is led by company Founder Gordon van Zuiden and Chief Operating Officer Patrick Rosengarten. For over 20 years Gordon has written a quarterly column on connected home solutions for Residential Systems Magazine, our industry's national magazine. From 2007 to 2013 he served on CEDIA's national board - an organization that supports the educational needs of custom home electronics professionals worldwide.

Patrick Rosengarten merged his company, AVNC, with the cyberManor team in 2016. Patrick brings to cyberManor over 25 years of experience in the custom installation business with a focus on high end audio/video offerings that complement cyberManor's networking expertise.

cyberManor's experienced staff includes professionally certified employees with extensive experience in low voltage design, installation, configuration, and programming. Our team provides full service home technology solutions from initial design to installation, final training and ongoing service and maintenance. Clients that began with cyberManor almost 20 years ago are still our clients today - engaging with our professional staff to provide digital technology solutions that keep their home up to date with today's latest digital home solutions.

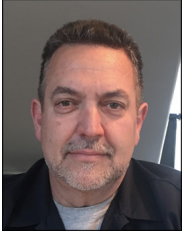

cyberManor has been a proud member of our national trade associations, CEDIA and CEA for over a decade.

PROJECT DESIGN

Our home technology designers will work with you in every area of your home, both inside and outside. We will review each area of the home and discuss the best entertainment, comfort, security, and control options for your needs and budget. Included in all of our design efforts is a tour of our new Control4 Certified Smart Home Experience Center located directly behind our Los Gatos office.

CRAFTSMANSHIP

Technology should blend into the interior and exterior design aesthetics of the home. We work very hard to make sure that all of the home technologies, from the media room cabinets, to the in-wall speakers, to the perimeter security cameras blend in with the architecture and interior design of each area. Our pre-wire low voltage infrastructure is designed and executed to insure that all wires are hidden in cabinets or walls.

PROJECT MANAGEMENT

Our project managers are the resources that keeps your project moving in a timely manner, communicating as a team member with all the trades involved in building or remodeling your home. Our managers also have extensive field installation experience so they know exactly the complexity of each given project and the time and resources required to complete them on time and on budget.

TEAM SPECIALITIES

Entertainment Systems
Whole House Audio Systems
Security and Camera Systems
Whole House Controls
Lighting and Motorized Shade Systems
Home Networking
Energy Monitoring and Management

TEAM CREDENTIALS
